

ABOUT EPIC

The Aspen Institute's Expanding Prosperity Impact Collaborative (EPIC) is a first-of-its-kind initiative in the field of consumer finance, designed to harness the knowledge of a wide cross-section of experts working in applied, academic, government, and industry settings toward the goal of illuminating and solving critical dimensions of household financial insecurity.

As part of Aspen's Financial Security Program (FSP), EPIC deeply explores one issue at a time, focusing on challenges that are critical to Americans' financial security but under-recognized or poorly understood. EPIC uses an interdisciplinary approach designed to uncover new, unconventional ways of understanding the issue and build consensus among decisionmakers and influencers representing a wide variety of sectors and industries. The ultimate goal of EPIC is to generate deeply informed analyses and forecasts that help stakeholders (1) understand and prioritize critical financial security issues, and (2) forge consensus and broad support to implement solutions that can improve the financial lives of millions of people. Our first issue was income volatility, followed by the current initiative on consumer debt.

ABOUT FSP

The Financial Security Program's mission is to illuminate and solve the most critical financial challenges facing American households and to make financial security for all a top national priority. We aim for nothing less than a more inclusive economy with reduced wealth inequality and shared prosperity. We believe that transformational change requires innovation, trust, leadership, and entrepreneurial thinking. FSP galvanizes a diverse set of leaders through deep, deliberate private and public dialogues and by elevating evidence-based research and solutions that will strengthen the financial health and security of financially vulnerable Americans.

EXECUTIVE SUMMARY

Lifting the Weight

SOLVING THE CONSUMER DEBT CRISIS FOR FAMILIES, COMMUNITIES & FUTURE GENERATIONS

Consumer debt is ubiquitous. Although at any given time some Americans are debt-free, most of us carry debt some or even all of the time. We borrow for various reasons, and we are increasingly likely to incur debt also from non-loan sources (such as an out-of-pocket medical expense or being assessed a governmental fine or fee). Consumer debt is not inherently bad (taking on debt can often be a sound financial decision), but it is a concern today because it has reached record levels, and its effects reach deeply into financial security, physical and mental health, as well as the broader economy. Consumer debt is a systemic problem with significant consequences, but there are systemic solutions.

With solutions ranging from product-level improvements to broader reforms, EPIC has identified options for stakeholders in every sector and for partnerships across sectors. Collectively, these solutions possess tremendous potential to address a critical dimension of household financial insecurity.

EPIC's research has identified seven specific consumer debt problems – all amenable to solutions – that result in financial insecurity and damage well-being. Four of the identified problems are general to consumer debt: households' lack of savings or financial cushion, restricted access to existing high-quality credit for specific groups of consumers, exposure to harmful loan terms and features, and detrimental delinquency, default, and collections practices. The other three problems relate to structural features of three specific types of debt: student loans, medical debt, and government fines and fees.

GOALS FOR SOLVING CONSUMER DEBT PROBLEMS

EPIC has developed a solutions framework to address all seven of these problems. The framework includes setting one or more tangible goals to achieve for each problem, and, for each goal, the solutions different sectors (financial services providers, governments, non-profits, employers, educational or medical institutions) can pursue.

For each of the seven problems identified in the solutions framework includes: a) a summation of the problem; b) one or more tangible goals that solutions should achieve; and c) for each goal, what solutions different stakeholders (financial services providers, governments, non-profits, employers, educational or medical institutions, as relevant) can pursue. The solutions reflect a mix of policy remedies and actions that private firms can undertake voluntarily. Greater detail on each solution can be found in EPIC's full solutions framework report.
