ALICE IN THE TIME OF COVID-19

The release of this ALICE Report for Louisiana comes during an unprecedented crisis — the COVID-19 pandemic. While our world changed significantly in March 2020 with the impact of this global, dual health and economic crisis, ALICE remains central to the story in every U.S. county/parish and state. The pandemic has exposed exactly the issues of economic fragility and widespread hardship that United For ALICE and the ALICE data work to reveal.

That exposure makes the ALICE data and analysis more important than ever. The ALICE Report for Louisiana presents the latest ALICE data available — a point-in-time snapshot of economic conditions across the state in 2018. By showing how many Louisiana households were struggling then, the ALICE Research provides the backstory for why the COVID-19 crisis is having such a devastating economic impact. The ALICE data is especially important now to help stakeholders identify the most vulnerable in their communities and direct programming and resources to assist them throughout the pandemic and the recovery that follows. And as Louisiana moves forward, this data can be used to estimate the impact of the crisis over time, providing an important baseline for changes to come.

This crisis is fast-moving and quickly evolving. To stay abreast of the impact of COVID-19 on ALICE households and their communities, visit our website at UnitedForALICE.org/COVID19 for updates.

LETTER TO THE COMMUNITY

Louisiana Association of United Ways

Message from Sarah H. Berthelot, President and CEO

ALICE lives in every town and every parish in our state — working as child care providers, aides for the elderly, cashiers, mechanics, and waiters and waitresses. During the COVID-19 pandemic, we witnessed countless ALICE workers provide essential services on the front lines, often times without adequate healthcare access and optimal childcare supports. They are our friends, family, and people we rely on every day — through good times and hard times.

Thank you for taking time to learn about ALICE in Louisiana. When ALICE can improve financial stability, we are all stronger and more prosperous.

A very special thanks to the Entergy Corporation for their generous support and activism for ALICE. The Louisiana Association of United Ways is also grateful for the partnership of United Ways throughout our state and the countless governmental, nonprofit, and business partners who work to find ways to help ALICE.

To access a digital copy of this publication, you can visit www.launitedway.org/ALICE

You can also access expanded ALICE data and resources for Louisiana at UnitedForALICE.org/Louisiana

Sarah H. Berthelot
President & CEO
Louisiana Association of United Ways
Entergy Corporation:
Louisiana ALICE Statewide Sponsor and National ALICE Advisory Council

Message from Patty Riddlebarger, Vice President of Corporate Social Responsibility

Entergy is pleased to work with United Ways throughout Louisiana and appreciate that partnership as we work together to bring forth the ALICE Report for Louisiana. It is an honor to serve as the Louisiana statewide sponsor since the inception of this project in 2016.

At Entergy, our focus on ALICE is rooted in the economic reality of the communities we serve — we know ALICE well. As we reflect on our collective experiences through COVID-19, we can see ALICE workers, providing essential services to help keep us safe and healthy. We also know that COVID-19 had a disproportionate impact on ALICE households. That’s why we are proud to have partnered with United Ways and other nonprofits to provide more than $1.3 million in assistance for ALICE families. As our communities continue to recover from the economic impact of COVID, it is important to lift up their stories and ensure ALICE has a proper place as we all chart the course for immediate recovery and beyond.

Entergy is deeply committed to equipping ALICE families with the tools to succeed while also inspiring action from businesses, policy makers and communities to build stronger financial stability for hardworking families throughout Louisiana.

Patty Riddlebarger

Entergy Corporation
ALICE REPORT, 2020 LOUISIANA

ALICE Reports provide high-quality, research-based information to foster a better understanding of who is struggling in our communities. To produce the ALICE Report for Louisiana, our team of researchers collaborated with a Research Advisory Committee composed of experts from across the state. Research Advisory Committee members from our partner states also periodically review the ALICE Methodology. This collaborative model ensures that the ALICE Reports present unbiased data that is replicable, easily updated on a regular basis, and sensitive to local context.

ALICE: A GRASSROOTS MOVEMENT

This body of research provides a framework, language, and tools to measure and understand the struggles of a population called ALICE — an acronym for Asset Limited, Income Constrained, Employed. ALICE represents the growing number of households in our communities that do not earn enough to afford basic necessities. Partnering with United Ways, nonprofits, academic institutions, corporations, and other state organizations, this research initiative provides data to stimulate meaningful discussion, attract new partners, and ultimately inform strategies for positive change.

Based on the overwhelming success of this research in identifying and articulating the needs of this vulnerable population, this work has grown from a pilot in Morris County, New Jersey to 21 states and more than 648 United Ways. Together, United For ALICE partners can evaluate current initiatives and discover innovative approaches to improve life for ALICE and the wider community. To access Reports from all states, visit UnitedForALICE.org

WHAT’S NEW IN ALICE RESEARCH

Every two years, United For ALICE undertakes a full review of the ALICE Methodology to ensure that the ALICE measures are transparent, replicable, and current in order to accurately reflect how much income families need to live and work in the modern economy. In 2019, more than 40 external experts — drawn from the Research Advisory Committees across our United For ALICE partner states — participated in the review process. A full description of the Methodology and sources is available at UnitedForALICE.org/Methodology.

This Report includes the following improvements:

More local variation: The ALICE budgets for housing, food, transportation, health care, and taxes incorporate more local data. For housing, we differentiate parishes within Metropolitan Statistical Areas using American Community Survey gross rent estimates. For food, the U.S. Department of Agriculture’s Thrifty Food Plan is adjusted at the parish level using Feeding America’s cost-of-meal data. For transportation, auto insurance is added to new miles-traveled data (discussed in the next paragraph) to reflect different driving costs by state. For health care, out-of-pocket costs are provided by census region. And taxes now systematically include local income tax, using data from the Tax Foundation.

Better reflection of household composition: Transportation and health care budgets now better reflect costs for different household members. The transportation budget for driving a car uses the Federal Highway Administration’s miles-traveled data, sorted by age and gender, and AAA’s cost-per-mile for a small or medium-sized car. The health care budget reflects employer-sponsored health insurance (the most common form in 2018, when it covered 49% of Americans), using the employee’s contribution, plus out-of-pocket expenditures by age and income, from the Agency for Healthcare Research and Quality Medical Expenditure Panel Survey.

More variations by household size: The median household size in the U.S. is three people for households headed by a person under age 65 and two people for households headed by seniors (65+). Reflecting this reality, the Household Survival Budgets are presented in new variations, including a Senior Survival Budget. The website provides data to create budgets for households with any combination of adults and children. The ALICE Threshold has also been adjusted to incorporate the most common modern household compositions. These new budget variations are included in the Parish Profile and Household Budget pages on UnitedForALICE.org/Louisiana.

New ALICE measures:

• The Senior Survival Budget more accurately represents household costs for people age 65 and over. Housing and technology remain constant; however, some costs are lower — transportation, food, and health insurance premiums (due to Medicare) — while others are higher, especially out-of-pocket health costs. Because over 90% of seniors have at least one chronic condition, the Senior Survival Budget includes the additional cost of treating the average of the five most common chronic diseases.

• The ALICE Essentials Index is a standardized measure of the change over time in the costs of essential household goods and services, calculated for both urban and rural areas. It can be used as a companion to the Bureau of Labor Statistics’ (BLS) Consumer Price Index, which covers all goods and services that families at all income levels buy regularly.

Data Notes: The data are estimates; some are geographic averages, others are one- or five-year averages depending on population size. Change-over-time ranges start with 2007, before the Great Recession, then measure change every two years from 2010 to 2018. Parish-level data remains the primary focus, as state averages mask significant differences between parishes. For example, the share of households below the ALICE Threshold in Louisiana ranges from 38% in Ascension Parish to 72% in Tensas Parish. Many percentages are rounded to whole numbers, sometimes resulting in percentages totaling 99% or 101%.

The methodological improvements included in this Report have been applied to previous years to allow for accurate year-over-year comparisons. This means that some numbers and percentages at the state and parish level will not match those reported in previous ALICE Reports for Louisiana.

From 2010 to 2018, Louisiana showed steady economic improvements according to traditional measures. Unemployment in the state and across the U.S. fell to historic lows, GDP grew, and wages rose slightly. Yet in 2018, eight years after the end of the Great Recession, 51% of Louisiana's 1,735,620 households still struggled to make ends meet. And while 18% of these households were living below the Federal Poverty Level (FPL), another 33% — almost twice as many — were ALICE households: Asset Limited, Income Constrained, Employed. These households earned above the FPL, but not enough to afford basic household necessities.

This Report provides new data and tools that explain the persistent level of hardship faced by ALICE households, revealing aspects of the Louisiana economy not tracked by traditional economic measures. The Report highlights three critical trends:

• **The cost of living is increasing for ALICE households.** From 2007 to 2018, the cost of household essentials (housing, child care, food, transportation, health care, and technology) increased faster than the cost of other goods and services. The ALICE Essentials Index, a new tool that measures change over time in the cost of essentials, increased at an average rate of 3.4% annually nationwide over the past decade, while the official rate of inflation was 1.8%.

• **Worker vulnerability is increasing while wages stagnate in ALICE jobs.** By 2018, a near-record-low number of people were reported to be unemployed. However, that low unemployment concealed three trends that expose ALICE workers to greater risk: growth in the number of low-wage jobs, minimal increases in wages, and more fluctuations in job hours, schedules, and benefits that make it harder to budget and plan. These trends were clear in 2018: A record number of Louisiana workers — 55% — were paid by the hour, and 64% of the state’s jobs paid less than $20 per hour.

• **The number of ALICE households is increasing in Louisiana** as a result of rising costs and stagnant wages. There are more ALICE households than households in poverty, and the number of ALICE households is increasing at a faster rate. The FPL, with its minimal and uniform national estimate of the cost of living, far underestimates the number of households that cannot afford to live and work in the modern economy. In Louisiana, the percentage of households that were ALICE rose from 23% in 2007 to 33% in 2018. By contrast, those in poverty remained at around 18% throughout the period.

This Report provides critical measures that assess Louisiana’s economy from four perspectives: They track financial hardship over time and across demographic groups; quantify the basic cost of living in Louisiana; assess job trends; and identify gaps in assistance and community resources. These measures also debunk assumptions and stereotypes about low-income workers and families. ALICE households are as diverse as the general population, composed of people of all ages, genders, races, and ethnicities, living in rural, urban, and suburban areas.

The Report concludes with an analysis of the economic benefits if all households had income above the ALICE Threshold. Not only would there be a significant positive impact on families and their communities, but the state economy would also benefit. In fact, the added value to the Louisiana GDP would be approximately $55.3 billion.

This Report and its measures are tools to help stakeholders ask the right questions, reduce vulnerabilities, remove obstacles to advancement, identify gaps in community resources, build a stronger workforce, and implement programs and policies that help put financial stability within reach for ALICE households. With the magnitude of financial hardship revealed, these actions can help move all households toward a more equitable economy and ensure that no one is left behind in harder times.
GLOSSARY

**ALICE** is an acronym that stands for *Asset Limited, Income Constrained, Employed* — households with income above the Federal Poverty Level but below the basic cost of living. A household consists of all the people who occupy a housing unit. In this Report, households do not include those living in group quarters such as a dorm, nursing home, or prison.

The **Household Survival Budget** estimates the actual bare-minimum costs of basic necessities (housing, child care, food, transportation, health care, and a basic smartphone plan) in Louisiana, adjusted for different parishes and household types.

The **Senior Survival Budget** incorporates specific cost estimates for seniors for food, transportation, and health care, reflecting key differences in household expenses by age.

The **Household Stability Budget** calculates the costs of supporting and sustaining an economically viable household over time, including a contingency for savings.

The **ALICE Threshold** is the average income that a household needs to afford the basic necessities defined by the Household Survival Budget for each parish in Louisiana. Households **Below the ALICE Threshold** include both ALICE and poverty-level households.

The **ALICE Essentials Index** is a measure of the average change over time in the costs of the essential goods and services that households need to live and work in the modern economy — housing, child care, food, transportation, health care, and a smartphone plan.

How many households are struggling?

ALICE, an acronym for Asset Limited, Income Constrained, Employed, comprises households that earn more than the Federal Poverty Level but less than the basic cost of living for the state (the ALICE Threshold). Of Louisiana’s 1,735,620 households, 314,968 earned below the Federal Poverty Level (18%) in 2018, and another 576,381 (33%) were ALICE.

What does the Louisiana labor force look like?

A 2018 overview of the labor status of Louisiana’s 3,667,278 working-age adults (people age 16 and over) shows that 59% of adults were in the labor force (blue bars), yet more than half were workers who were paid hourly. Hourly paid jobs tend to have lower wages, fewer benefits, and less stability. In addition, 42% of adults were outside the labor force (gold bars), either because they were retired or because they had stopped looking for work.

Labor Status, Population Age 16 and Over, Louisiana, 2018

Note: Data for full- and part-time jobs is only available at the national level; these national rates (51% of full-time workers and 75% of part-time, hourly workers) have been applied to the total Louisiana workforce to calculate the breakdown shown in this figure. Full-time represents a minimum of 35 hours per week at one or more jobs for 48 weeks per year. Many percentages are rounded to whole numbers, sometimes resulting in percentages totaling 99% or 101%.
What does it cost to afford the basic necessities?
The average ALICE Household Survival Budget in Louisiana was $24,252 for a single adult, $27,000 for a single senior, and $69,732 for a family of four in 2018 — significantly more than the Federal Poverty Level of $12,140 for a single adult and $25,100 for a family of four.

WHO IS ALICE?

With income above the Federal Poverty Level (FPL) but below a basic survival threshold — defined as the ALICE Threshold — ALICE households earn too much to qualify as “poor” but are still unable to make ends meet. They often work as cashiers, nursing assistants, office clerks, servers, laborers, and security guards. These types of jobs are vital to keeping Louisiana’s economy running smoothly, but they do not provide adequate wages to cover the basics of housing, child care, food, transportation, health care, and technology for these ALICE workers and their families.

Between 2007 and 2018, the total number of households in Louisiana increased by 9%, from 1,597,111 to 1,735,620 (although the total population rebounded after Hurricane Katrina, then decreased from 2016 to 2018). During this period, the number of households in poverty remained relatively flat — ranging between 18% and 19% of all households — with a slight decrease between 2016 and 2018. The number of ALICE households increased significantly between 2007 and 2018 (from 374,281 to 576,381, a 54% increase) with their share of all households rising from 23% to 33% during this time. Overall, the percentage of households living below the ALICE Threshold (ALICE and poverty-level households combined) increased from 41% in 2007 to 51% in 2018 (Figure 1).

Figure 1.
Households by Income, Louisiana, 2007–2018

ALICE households live in every parish in Louisiana — urban, suburban, and rural — and they include people of all genders, ages, and races/ethnicities, across all household types. Figure 2 shows that in 2018, the largest numbers of households below the ALICE Threshold were in the largest demographic groups in Louisiana — namely, households headed by someone over the age of 45, single or cohabiting households (without children or seniors), and White households. Among families with children, married-parent families were the largest subgroup and accounted for 31% of families with children living below the ALICE Threshold.
Figure 2.
Household Types by Income, Largest Groups, Louisiana, 2018

Total Households = 1,735,620

- Hispanic
- Single-Female-Headed
- Married With Children
- Seniors (65+)
- Families With Children
- Black
- 25 to 44 Years Old
- 45 to 64 Years Old
- Single or Cohabitng
- White

Each circle represents 30,000 households.

Below ALICE Threshold
Above ALICE Threshold

Note: The groups shown in this figure overlap across categories (age, household type, race/ethnicity). Within the race/ethnicity category, all racial categories except Two or More Races are for one race alone. Race and ethnicity are overlapping categories; in this Report, the Asian, Black, Hawaiian (includes other Pacific Islanders), and Two or More Races groups may include Hispanic households. The White group includes only White, non-Hispanic households. The Hispanic group may include households of any race. Because household poverty data is not available for the American Community Survey’s race/ethnicity categories, annual income below $15,000 is used as a proxy.

Sources: ALICE Threshold, 2018; American Community Survey, 2018

Another way to examine the data is to look at the proportion of each group that is below the ALICE Threshold. Overall, 51% of households in Louisiana had income below the ALICE Threshold in 2018. But several groups had a disproportionately high percentage of families below the ALICE Threshold. Three of these groups are shown in Figure 2: Seniors, Black households, and single-female-headed families with children, with 58%, 70%, and 87%, respectively. Additional smaller groups also had a disproportionately high percentage of households below the ALICE Threshold, including households headed by someone of two or more races, single-male-headed households with children, and households headed by someone under 25 years old. Asian households, also a small group, had a percentage of households below the ALICE Threshold (44%) that was just under the state average (Figure 3).

Figure 3.
Select Household Groups by Income, Louisiana, 2018

Asian: 44%
Two or More Races: 55%
Single-Male-Headed With Children: 60%
Under 25 Years Old: 79%
All Households: 51%

Sources: ALICE Threshold, 2018; American Community Survey, 2018
A growing number of households live on the edge of the ALICE Threshold. For these households, even a small increase in the cost of housing or a decrease in work hours can mean the difference between being financially stable and being ALICE. In Louisiana, 12% of households (207,675) were on the cusp of the ALICE Threshold in 2018; of those, nearly two-thirds earned just above the ALICE Threshold and more than one-third earned just below it. This matters for families, but it can also impact the Louisiana economy as a whole: Even a small drop in wages or hours worked, or an unexpected emergency — such as a factory closing or a natural disaster — could destabilize a large number of households. Conversely, a small increase in wages or a decrease in rent or a car payment could help push families above the Threshold.

Louisiana is increasingly diverse. Between 2010 and 2018, the total number of White households in Louisiana remained flat, while the number of households of color continued to increase (at a rate of 6% for Black households, 15% for Asian households, and 36% for Hispanic households). During the same period, financial hardship grew across all of these groups, but at a much faster rate for non-White households. The number of White households below the ALICE Threshold grew by 11%, while Black households below the ALICE Threshold increased by 17%, Asian households by 28%, and Hispanic households by 65%. Notably, the growth in financial hardship among Hispanic households was largely driven by those headed by someone in their prime working years (age 25 to 64), with a staggering 95% increase in the number of these households below the ALICE Threshold between 2010 and 2018.

Louisiana is also home to two mixed-race groups that are not reported as separate categories by the U.S. Census Bureau — Cajuns and Creoles. Cajuns are a unique group of people descended from Acadians, French-speaking Whites from Nova Scotia, Canada. Over 60,000 Cajuns lived in Louisiana in 2018, residing primarily in 22 parishes in south Louisiana, with a distinctive culture, dialect, and cuisine. Creoles — mixed-race and multicultural people of African, European, and possibly Native American ancestry — live primarily in southern Louisiana and the coastal portions of Mississippi and Alabama. When defined as multiracial (two or more races, by Census designation), present-day Creoles account for as much as 1.2% of the Louisiana population in 2018.

Louisiana’s household structure continues to change. The number of married-parent families with children decreased from 2010 to 2018, falling 7%. In 2018, single or cohabiting adults under age 65 with no children under age 18 made up the largest proportion of households in Louisiana (48%), as well as the largest share of households below the ALICE Threshold (47%). Nationally, the number of cohabiting adults more than doubled between 1996 and 2017, and these partners tend to have higher levels of education and be more racially diverse today than cohabiting adults 20 years ago.

Baby boomers and millennials, the two largest population bubbles, are getting older. This natural aging of the population is increasing the number of seniors as more boomers pass age 65. It is also reducing the proportion of both college-age students and families with children as millennials have passed traditional college age, are having fewer children, and are waiting longer than previous generations to have them.
Among seniors, there are three trends. First, the White population in Louisiana is older than other racial/ethnic groups and will continue to account for an increasing share of the senior population. Second, having lived through a decade of financial challenges since the Great Recession, more Louisiana seniors will become ALICE. Furthermore, without the many policies and programs in place to help seniors financially — such as Social Security, property tax deductions or exemptions based on age, and senior discounts for both private and public purchases — many more seniors would fall below the ALICE Threshold. And third, seniors make up a larger portion of households in rural areas, where they will continue to face additional challenges in access to transportation, health care, and caregiving. A 2019 report on senior health ranked Louisiana 48th out of 50 states, on issues related to health behaviors (e.g., smoking, physical inactivity, excessive drinking), community and environmental factors (e.g., nursing home quality, poverty, food insecurity), and health outcomes (e.g., mental distress, falls, ICU use). Louisiana also had the highest percentage of seniors who avoided health care due to cost in 2019 (7.2%).

Inequality in income and wealth will continue to rise as wage growth and job stability in high-wage jobs greatly outpace growth and stability at the lower end. Nationwide, from the late 1940s to the early 1970s, incomes across the income distribution grew at nearly the same pace. Then, beginning in the 1970s, income disparities began to widen: The average income for the top 1% increased over five times more than that of the middle 60% and over three times more than that of the bottom fifth, from 1979 to 2016. In Louisiana, the average income of the top 1% was 18 times higher than the average income of the bottom 99% by 2015. Opelousas had the largest gap in the state (ranking 43rd out of all U.S. metropolitan areas), with the top 1% earning 26.5 times more than all other earners. The gap in wealth (savings and assets) is even greater. Unable to save, ALICE families do not have the means to build assets, let alone catch up to those who already have assets (especially those who have been building assets for generations). ALICE families also face more barriers that, when compounded, create an even bigger wealth gap. These include issues like lower pay for women, racial/ethnic discrimination in homeownership, and student loan debt.
THE COST OF LIVING IN LOUISIANA

Traditional economic measures systematically underestimate the actual cost of basic needs and their rate of increase over time, concealing important aspects of the local and national economy. To better capture the reality of how much income households need to live and work in the modern economy in each parish in Louisiana, this Report includes the ALICE Household Budgets. In addition, the Report presents the ALICE Essentials Index, a standardized national measure that captures change over time in the cost of household essentials that ALICE households purchase. Together, these tools provide a more accurate estimate of the cost of living and a clearer way to track change over time.

THE ALICE HOUSEHOLD BUDGETS

United For ALICE provides three basic budgets for all parishes in Louisiana. Each budget can be calculated for various household types.

- The ALICE Household Survival Budget is an estimate of the minimal total cost of household essentials — housing, child care, food, transportation, health care, and technology, plus taxes and a miscellaneous contingency fund equal to 10% of the budget. It does not include savings, auto repairs, cable service, travel, laundry costs, or amenities such as holiday gifts or dinner at a restaurant that many families take for granted.

- The Senior Survival Budget, new to this Report, adjusts the Household Survival Budget to reflect the fact that seniors have lower food costs than younger adults, travel fewer miles for work and family responsibilities, and have increasing health needs and out-of-pocket health care expenses.

- For comparison to a more sustainable budget, the ALICE Household Stability Budget estimates the higher costs of maintaining a viable household over time, and it is the only ALICE budget to include a savings category, equal to 10% of the budget.

The actual cost of household basics in every parish in Louisiana is well above the Federal Poverty Level (FPL) for all household sizes and types (Figure 4). For a single adult, the FPL was $12,140 per year in 2018, but the average Household Survival Budget in Louisiana was $24,252 per year. The average Senior Survival Budget totaled $27,000 per year, primarily due to increased health costs. (Despite having Medicare, seniors have greater out-of-pocket health care costs, largely due to increased spending on chronic health issues like heart disease and diabetes.) And all budgets were significantly lower than the Household Stability Budget, which reached $47,532 per year for a single adult.

The gaps are even larger for families. The FPL for a four-person family was $25,100 in 2018, while the Household Survival Budget for a family with two adults, an infant, and a four-year-old was $69,732.13

The hourly wages needed to support these budgets were $12.13 for the single adult Survival Budget; $13.50 for the Senior Survival Budget; and $34.87 for one worker or $17.44 each for two workers for the Survival Budget for a family of four. To put these budgets in perspective, the median hourly wage for the most common occupation in Louisiana, cashier, was $9.10 in 2018, or $18,200 if full time, year-round — not enough to support any of the ALICE budgets.

Public assistance programs are based on the FPL, but the FPL is not enough for a household to cover even its most minimal costs, as shown by the comparison to the Household Survival Budget in Figure 4. This means that assistance programs serve far fewer households than actually need assistance, even in a strong economy.

To see the details of each ALICE budget for different household types, visit UnitedForALICE.org/Louisiana.
Figure 4.
Budget Comparison, Louisiana, 2018

Note: The FPL is a total; there is no breakdown of how that amount is allocated by budget category.

THE ALICE ESSENTIALS INDEX

Based on items in the Household Survival Budget, the ALICE Essentials Index measures the change over time in the costs of household essentials — a much narrower definition than the more common rate of inflation based on the BLS Consumer Price Index (CPI). While the CPI covers a large group of goods and services that urban consumers buy regularly (housing, food and beverages, transportation, medical care, apparel, recreation, education, and communication services), the ALICE Essentials Index includes only essential household items (housing, child care, food, transportation, health care, and a smartphone plan). The ALICE Essentials Index is also calculated for both urban and rural areas, while the CPI only tracks inflation based on a select number of metropolitan (urban) counties/parishes. For more detailed information, see the 2020 ALICE Essentials Index Report at UnitedForALICE.org/Essentials-Index.

Across the country, the ALICE Essentials Index has increased faster than the CPI over the last decade (Figure 5). From 2007 to 2018, the average annual rate of increase was 3.3% in urban areas and 3.4% in rural areas, while the CPI increased by 1.8%. This difference is primarily due to the fact that the costs of basics, especially housing and health care, have increased, while the costs of other items — notably manufactured goods, from apparel to cars — have remained relatively flat. And while basic household goods were 18% to 22% more expensive in urban areas than in rural areas, those costs increased at nearly the same rate in both areas during this period.

Figure 5.
Consumer Price Index and ALICE Essentials Index, United States, 2007–2018

The difference between these two cost-of-living measures is more than an academic question. The CPI is used to measure inflation and monitor monetary policy. It also determines the rate at which a wide range of government program levels and benefits are increased, including Social Security, veterans’ and Federal Civil Service retirees’ benefits, government assistance programs, the FPL, income tax brackets, and tax credits like the Earned Income Tax Credit (EITC). But the ALICE Essentials Index shows that from 2007 to 2018, the CPI considerably underestimated the increase in the cost of living for ALICE households across the country.

TRENDS: COST OF LIVING

The cost of living for ALICE is growing significantly in both urban and rural areas, often driven by the cost of housing. In Louisiana, rising costs in urban areas — notably the metropolitan areas of New Orleans and Baton Rouge — are due to population growth and increasing demand for low-cost, urban rental units (especially among millennials and seniors). Renters in New Orleans, in particular, face issues related to housing affordability: Out of the 50 largest metropolitan areas in the country, in 2018, New Orleans had the 5th highest percentage of rent burdened households (with rent accounting for more than 30% of their income) and the 4th highest percentage of severely rent burdened households (with rent accounting for more than 50% of their income). This trend will continue as demand for affordable rental units outpaces supply.18 And while the overall cost of living in rural America is lower than in metro areas, expenses — especially housing — are rising at similar rates in both areas. In Louisiana — particularly in rural areas — many households live in mobile homes, which are less expensive than other housing units, but are more susceptible to storm and flood damage. Across the state, around 13% of housing units are mobile homes, a percentage twice as high as the national average.19 Nationwide, households that are severely rent burdened are projected to grow by at least 11%, to 13.1 million households, by 2025.20

Health care costs continue to comprise a large portion of the household budget across the state, while health disparities grow. Many families struggle to get the health care they need due to volatility in health insurance availability and coverage, increasing out-of-pocket costs (even for those with employer-sponsored programs), and shortages of health care providers, especially in rural areas.21 Louisiana ranked 49th — the second-lowest score — in the Commonwealth Fund’s 2018 survey of state health systems, with particular issues of access and affordability, prevention and treatment, and avoidable hospital use and cost.22 The state scored in the bottom quartile for the percentage of uninsured adults, adults going without care due to cost, and high employee insurance costs. While insurance rates have shown improvement over time — largely due to the state’s Medicaid expansion in 2016 — the growing percentage of adults forgoing care due to cost suggests that health care spending continues to be an issue for Louisiana residents.23 Disparities in health based on demographic, environmental, and socioeconomic factors will grow with new but expensive advances in medicine, compounded exposure to environmental hazards, and public health crises, and a persistent context of discrimination and institutionalized racism in Louisiana and across the country.24

Commuting times will continue to increase, as will demand for alternative transportation options. High housing costs and urban sprawl push workers farther from their jobs and increase commute times, which has a negative impact on health, job retention, and productivity. With these pressures, along with minimal public transportation infrastructure and the cost of owning and maintaining a car, there will be increased demand in Louisiana to explore new public transportation options (e.g., trains and buses, rideshares, and self-driving vehicles).25 These issues are compounded by the fact that much of the state’s existing transportation infrastructure is in disrepair. A 2019 report found that 47% of Louisiana’s major roads and highways are in poor or mediocre condition, which costs the average driver an estimated $625 in additional vehicle costs each year (totaling $2.1 billion statewide). Combined with additional costs incurred due to traffic congestion and vehicle crashes, Louisiana drivers face a total of $6.9 billion in additional costs each year.26
The child care industry will face new challenges, and so will parents. As the number of families with children starts to decrease (down 7% in Louisiana from 2010 to 2018 despite a 3% increase in total households), it will be more difficult for child care centers to stay in business, making child care harder to find, especially in less populated areas. A 2017 survey of Louisiana families with children found that half of households with children reported using a family member for child care, with higher rates of family-based child care in rural parishes. At the same time, the cost of child care continues to increase. In 2018, the average annual costs for home-based care ($7,540) and center-based care ($8,580) for an infant were similar to the average annual tuition at a public four-year university in Louisiana, with average costs rising 12% between 2016 and 2018. Lack of accessible, affordable care has a significant impact on families with children: 16% of survey respondents reported quitting their job, and almost half missed work in the prior three months, due to child care issues, while 18.5% said that child care needs caused them to leave full-time employment and work part time. Earners in single-parent families, who are less able to leave a job or reduce hours, are also more likely to have incomes below the ALICE Threshold.

Compounding these issues is the fact that low-paid child care workers (with a median hourly wage of $9.03 in Louisiana) are also ALICE. The overall trend, then, is toward fewer families with children but more who are struggling. This matters for families and workers, but it also has an impact on the state economy: A 2017 study found that child care issues — such as lack of affordable care or care during needed hours — resulted in an estimated $1.1 billion annual loss for Louisiana’s economy (including $84 million annually in lost tax revenue alone).28

Food insecurity, a longstanding problem for families with children, is also increasing among young adults and seniors. A 2018 report found that Louisiana had the second-highest rate of food insecurity in the country, and that rate was growing faster than in other states, with a 5.6% increase since 2007 (much higher than the average national increase of 0.7% during the same period).29 Although people of all ages face food insecurity, some populations have seen a more significant increase in recent years. In 2018, households headed by adults under the age of 25 were more likely to be below the ALICE Threshold compared to other age groups in Louisiana, and they often struggled to put food on the table. For example, reports consistently find higher rates of food insecurity among college students. There is also growing food insecurity at the other end of the age spectrum, with a projected 8 million food-insecure seniors nationwide by 2050. A 2019 senior health report ranked Louisiana worst out of all 50 states for senior food insecurity, with a rate three times higher than the best state on this measure. Nationally, food-insecure seniors are more than twice as likely as other seniors to have depression, 91% more likely to have asthma, 66% more likely to have had a heart attack, and 57% more likely to have congestive heart failure. Public benefits help but do not eliminate the need for emergency assistance measures, such as food pantries.30

College students across the country are facing greater challenges in meeting living expenses, despite the fact that increasing numbers of students are working full or part time. Students often rely on multiple sources of financial support, including financial aid, student loans, and assistance from parents or other family members, to cover their living expenses. Yet even with these types of financial help, many students need to work while in school; in particular, more than two-thirds of students enrolled in community colleges work full or part time.31 In a recent financial wellness survey, 56% of students report paying for college using money from their current employment, and 31% of students pay for college with credit cards, leading to accumulation of increased debt.32 Working long hours to earn more income comes at a price, as it can interfere with academic performance and ultimately the likelihood of obtaining a
Students report that two of the major obstacles to academic success are juggling work with school and other responsibilities, and difficulty meeting expenses. For more information, see the 2019 United For ALICE Report, *The Consequences of Insufficient Household Income*.

**Natural and human-made disasters will continue to impact ALICE households disproportionately.** Louisiana has endured numerous disasters, from hurricanes Katrina and Rita, to frequent large-scale flooding. The increasing impact of these and other incidents (from tornados to pandemics) is felt most acutely by ALICE households and their surrounding communities. With minimal job security and little or no savings, ALICE families feel the impact of an economic disruption almost immediately, as hourly paid workers suffer lost wages right away, especially in Louisiana’s large tourism and hospitality industries. ALICE households are more vulnerable during natural disasters, as they often live in communities with fewer resources and their housing is more susceptible to flooding, fire, and other hazards. With repeated disasters in Louisiana and no financial cushion, ALICE workers struggle to repair damage, recover from illness, and pay ongoing bills. At the same time, ALICE workers are essential to disaster recovery efforts in both infrastructure repair and health care, and they are often forced to choose between caring for their families and ensuring community recovery. All of these costs are added to the increased risk of physical harm ALICE families face if they cannot afford to flee an oncoming natural disaster or take necessary precautions during a public health crisis.

**Financial instability will mean additional costs for ALICE households.** The costs of financial instability are cumulative and intensify over time. Skimping on essentials, from food to health care, leads to greater long-term problems (see United For ALICE’s 2019 Report *The Consequences of Insufficient Household Income*). Failure to pay bills on time leads to fees, penalties, and low credit scores, which in turn increase interest rates, insurance rates, and costs for other financial transactions (from check-cashing fees to payday cards). Unexpected expenses can intensify these impacts. In 2017, only 51% of Louisiana households had set aside any money in the prior 12 months that could be used for unexpected expenses or emergencies such as illness or the loss of a job — a rate just above the national rate of 42%. And without enough income to cover current and unexpected expenses, ALICE households cannot save for future expenses like education, retirement, or a down payment on a house.
THE CHANGING LANDSCAPE OF WORK IN LOUISIANA

ALICE workers play an essential role in Louisiana’s economy but have not benefited from many of the state’s recent economic gains — a reality that is not captured by traditional economic measures. This section breaks down labor force data in new ways, and in so doing highlights the challenges ALICE workers face: the declining power of wages to keep up with the cost of living, greater dependence on hourly wages, a historically high number of adults out of the labor force, and increased economic risk for workers.

With a near-record-low unemployment rate, and a real GDP that was finally showing some growth after almost a decade of decline and stagnation, Louisiana appeared to have a rebounding economic profile in 2018, with only 4% of adults actively looking but unable to find work. Yet statewide employment growth over the last 10 years was relatively flat — especially between 2014 and 2018 — and the economy was dominated by low-wage jobs that could not keep up with the increase in the cost of the basic household budget (Figure 6).

Figure 6 illustrates the following trends in wages compared to the cost of living in Louisiana from 2007 to 2018:

- Low-wage jobs (dark-blue line) are defined as those paying less than the wage needed for two workers to afford the family Household Survival Budget (which includes costs for two adults, an infant, and a four-year-old). In 2007, this was less than $10.56 per hour; by 2018, the wage required had increased to $17.43 per hour. The number of low-wage jobs increased by 68% during that period, and by 2018, surpassed the number of medium-wage jobs to account for the largest number of jobs in Louisiana. This shows that, even with two earners working full time, it is not only possible but common for households to fall below the ALICE Threshold.

- Medium-wage jobs (light-blue line) allow two workers to afford a family Household Survival Budget. In 2007, these were jobs that paid between $10.56 and $21.13 per hour, per worker; by 2018, wages needed for these jobs were between $17.44 and $34.86 per hour, per worker. The number of medium-wage jobs stayed fairly flat, decreasing by 5% during that period.

- High-wage jobs (gold line) allow one worker to afford a family Household Survival Budget. In 2007, the wage required was $21.13 per hour or more; by 2018, the wage required had increased to $34.86 per hour. The number of high-wage jobs decreased by a 59% during that period.38

“Statewide employment growth over the last 10 years was relatively flat — especially between 2014 and 2018 — and the economy was dominated by low-wage jobs that could not keep up with the increase in the cost of the basic household budget.”
Figure 6.
Number of Jobs by Wage Level, Louisiana, 2007–2018

The strength of the economy with respect to GDP and employment also varied significantly by location and industry. By location, the Lake Charles metropolitan area saw the largest growth in the state in real GDP (adjusted for inflation in 2012 dollars), increasing almost 30% between 2010 and 2018, while the Houma-Thibodaux and New Orleans-Metairie metropolitan areas saw the largest decreases, at 14% and 19%, respectively. (The drops in real GDP for the Houma-Thibodaux and New Orleans-Metairie were also the largest of all U.S. metropolitan areas during this period.) Industries varied in terms of gains and losses: In 2018, GDP and employment for both agriculture and manufacturing fell to a decade low, while GDP and employment for construction were at their highest point in a decade. In the same year, employment in mining, oil, and gas — which has long been a significant part of the Louisiana economy — decreased almost 40% from its high-point in late 2013. Most industries with employment gains over the past decade saw growth largely concentrated in low-wage jobs — for example, in the retail trade and leisure and hospitality sectors (and the tourism industry more broadly).
THE NEW LABOR FORCE

A 2018 overview of the labor status of Louisiana’s 3,667,278 working-age adults (people age 16 and over) shows that 59% of adults were in the labor force (blue bars in Figure 7), yet more than half of them were workers who were paid hourly. In addition, 42% of adults were outside the labor force (gold bars), the largest number since 197841 (Figure 7).

Figure 7.
Labor Status, Population Age 16 and Over, Louisiana, 2018

Note: Data for full- and part-time jobs is only available at the national level; these national rates (51% of full-time workers and 75% of part-time workers paid hourly) have been applied to the total Louisiana workforce to calculate the breakdown shown in this figure. Full-time represents a minimum of 35 hours per week at one or more jobs for 48 weeks per year. Many percentages are rounded to whole numbers, sometimes resulting in percentages totaling 99% or 101%. Many percentages are rounded to whole numbers, sometimes resulting in percentages totaling 99% or 101%.

Sources: American Community Survey, 2018; Federal Reserve Bank of St. Louis, 2018

Though the majority of adults in Louisiana were working in 2018 and most households had at least one worker, only 23% of working-age adults had the security of a full-time job with a salary. The rest were paid hourly and/or worked part time.42

Hourly Work and the Gig Economy

Employers’ increasing reliance on hourly workers is typically associated with freelance “gig economy” jobs (like musical performance, rideshare driving, or on-demand delivery), but even traditional jobs are now more likely to be paid by the hour, especially in retail, health care, food service, and construction.43 These workers are more likely to have fluctuations in income, with frequent schedule changes and variation in the number of hours available for work each week/month. They are also less likely to receive benefits such as health insurance, paid time off, family leave, or retirement benefits, especially if they work fewer than 30 hours per week at a single job.44
Low wages can compound these issues. In 2018, Louisiana had the highest percentage of hourly workers earning at or below the federal minimum wage in the country, according to the BLS — 4.5% compared to the national average of 2.1%. And while a common perception is that these workers are young, working part-time while in school, nationwide, 53% of these workers were 25 years and older, 43% worked full-time, and 49% had some college education or higher. A 2018 analysis by the Louisiana Budget Project found similar results when estimating the impact of raising the Louisiana minimum wage to $8.50 in 2020 (up from $7.25). Of workers who would have been impacted by this increase, 59% were 25 years and older, 55% were full-time workers, 39% had some college education or higher, and 28% were a single or married parent.

Hourly workers are more likely to have multiple sources of income. Traditional measures of employment have focused on the number of jobs held by a worker; for example, BLS estimates that only 5% of workers held two or more jobs in 2018. However, in the modern economy, where many workers have their own small business, are consultants, or are contingent, temporary, freelance, or contract workers, a worker may have many sources of income that are not necessarily considered a “job.” In 2019, nearly half (45%) of working adults reported having a side gig outside of their primary job.

In comparison with hourly workers, salaried workers are paid an annual amount at regular pay periods, and usually receive benefits. Nationally, employers spent an average of 31% of compensation on benefits in 2018; not providing these represents significant savings to the employer. As a result, even traditional jobs are morphing as employers shift the financial risk of changes in supply and demand to employees. While this is true throughout the economy, it is especially concentrated in lower-wage positions — the jobs most accessible to ALICE.

Who is Out of the Labor Force?

Of adults 16 years and older in Louisiana, 16% were out of the labor force in 2018 because they were retired and another 26% were out of the labor force for other reasons (gold bars in Figure 7). This totals 42% of adults outside the labor force, one of the highest rates in the country.

Retirees (age 65 and over and not working) are traditionally one of the largest groups of adults out of the labor force. In Louisiana, they accounted for a high percentage in 2018, due in part to the baby boomer generation aging into retirement. However, this number did not include the increasing number of seniors who were still working; in 2018, 20% of seniors in Louisiana were still in the labor force.

Those under 65 and not working were out of the labor force for a variety of reasons, the two most common being:

- **School:** Nationally, 77% of high school students and 52% of college students did not work in 2018. At these rates, non-working students in Louisiana would account for almost one-third (29%) of the state’s working-age adults out of the workforce.

- **Health:** Adults with one or more health issues — an illness or disability that makes it difficult to get to work, perform some job functions, or work long hours — accounted for one-quarter (25%) of those out of the labor force in Louisiana in 2018 (the 12th highest percentage of all states).

The remainder of adults were out of the labor force for other reasons, including scheduling conflicts, family caregiving responsibilities, or limited access to transportation or child care. For women 25 to 54 years old, the most common reason for not working in 2018 was in-home responsibilities — caring for children, but also, as the population of Louisiana ages, caring for an aging parent or a family member with a disability or chronic health issue.
These adults who were out of the workforce were not included in the state's low unemployment rate, which only counts adults actively looking for work. In previous periods of low unemployment, employers have had to offer much higher wages to attract workers back into the labor force or away from other businesses. However, in the 2018 economy, those out of the labor force proved to be a large reserve of potential workers able to be drawn back into the labor force with only slightly higher wages — in effect, keeping wages low.56

ALICE JOBS: MAINTAINING THE ECONOMY

While national conversations about work often focus on the economic importance of the “innovation” sector and its high-paying jobs, the reality is that the smooth functioning of the national and Louisiana economies relies on a much larger number of occupations that build and repair the infrastructure and educate and care for the past, current, and future workforce. The workers in these jobs are described as “Maintainers” by technology scholars Lee Vinsel and Andrew Russell, and they are primarily ALICE.57 To better understand where ALICE works, we elaborate on Vinsel and Russell’s concept by breaking down all occupations in Louisiana into two occupational categories, each with two job types: the lower-paying Maintainer occupations, composed of Infrastructor and Nurturer jobs; and the higher-paying Innovator occupations, composed of Adaptor and Inventor jobs.

The largest employment sectors in Louisiana are comprised primarily of Maintainer occupations. The single largest industry group in 2018, with 380,000 employees, was trade, transportation, and utilities, which is comprised of Infrastructor jobs. The second largest, with 336,000 employees, was leisure and hospitality, which is comprised of Nurturer jobs. Both industries have large shares of ALICE workers.58 There are far fewer jobs in Innovator occupations (Adaptors and Inventors).

DEFINITIONS

Maintainer Occupations:

- **Infrastructors** build and maintain the physical economy (construction, maintenance, management, administration, manufacturing, agriculture, mining, transportation, retail).
- **Nurturers** care for and educate the workforce (health and education, food service, arts, tourism, hospitality).

Innovator Occupations:

- **Adaptors** implement existing tools or processes in new ways, responding to opportunities and changing circumstances (managers, industrial and organizational psychologists, analysts, designers, technicians, and even policymakers).
- **Inventors** devise new processes, appliances, machines, or ideas. Before World War II, most inventors were independent entrepreneurs. Today, they are most likely engineers and scientists working in research & development, and, in some cases, higher education.

When stacked together, Louisiana’s occupations form a pyramid that reveals the critical role of Maintainer jobs — the jobs most accessible to ALICE — in the state economy (Figure 8). The majority of Maintainer jobs (66% of Infrastructor jobs and 66% of Nurturer jobs) pay less than $20 per hour — a wage that, if full time, year-round, provides a maximum annual salary of $40,000, or $29,732 less than the family Household Survival Budget of $69,732. By comparison, almost all Adaptor and Inventor occupations pay more than $20 per hour.
The precarious nature of ALICE workers’ jobs is reinforced by the powerful relationship between low wages and the high risk of jobs becoming automated (defined as having a greater than 50% chance of being replaced by technology in the next decade). Jobs that pay less than $20 per hour are more likely to be replaced by technology compared to higher-paying jobs. This is especially true for Maintainer occupations, where most jobs pay less than $20 per hour and 84% of these low-paying jobs are at a high risk of automation. By comparison, only 34% of Maintainer jobs that pay more than $20 per hour are at that level of risk (Figure 9).
There are also differences in salary and risk of automation based on the type of Maintainer job. Among Infrastructor jobs, 93% of jobs that pay less than $20 per hour are at risk of automation, compared to 50% of those that pay more than $20 per hour. Among Nurturer jobs, the discrepancy is even greater: 67% of jobs that pay less than $20 per hour are at risk of automation, compared with 1% of those that pay more than $20 per hour. Education level also impacts risk of automation; nationally, the risk for jobs that require only a high school diploma (55%) is more than double the risk for jobs that require a bachelor’s degree (24%).

**TRENDS: THE LANDSCAPE OF WORK**

**Economic growth will be led by the non-traditional work and small businesses of the gig economy.** As much as 94% of U.S. net employment growth in the last decade has come from alternative or contingent labor, according to a National Bureau of Economic Research report. With an increasing number of workers who are contractors, work in small businesses (which employ over half of the private workforce in Louisiana), or rely on a combination of side gigs, the number of people experiencing gaps in income and going without benefits will also rise. Millennials are leading the way in this trend, with 48% nationally saying they earn income on the side (i.e., in addition to what they consider their primary employment), compared to 28% of baby boomers. These arrangements are more volatile than traditional jobs, and workers bear the brunt of changes in demand, the price of materials, and transportation costs, as well as impacts related to cyberattacks, natural and human-made disasters, and economic downturns.
The rise of automation will require a workforce with more digital skills. Rather than being replaced outright, many jobs, across all job types, will require an increasing ability to incorporate new technologies, work with data, and make data-based decisions. In Louisiana, this has been the case in the large oil and gas industry, where new technologies — along the production line, from the wellhead to the gas station pump — have transformed the way that workers interact with data. For example, sensors on drilling equipment provide continuous diagnostics that must be monitored and interpreted, and the equipment and sensors themselves also need maintenance and repair. ALICE workers across industries will need to gain new skills rapidly, and that will require more on-the-job training, more flexibility to change career paths, and different kinds of education providers. The benefits of increased technology will include improved accuracy in areas like pharmaceutical pill dispensing, and reduced risk of injury for workers such as offshore oil workers and long-distance drivers.

The number of low-wage jobs will continue to increase, despite automation. Even though most jobs will change and evolve with demand as well as technology, it may not be economical or effective to automate certain jobs. For example, low-wage Maintainer jobs in areas like education and health care require employees to be on-site and often involve relational skills that are difficult or impossible to automate (although these workers will still have to learn to work with technology). From 2016 to 2026, the occupation projected to have the largest number of new jobs in Louisiana is personal care aides; the median wage for these jobs in 2018 was $8.96 per hour, which was not enough to support the single-adult, senior, or family Survival Budgets. Of the state's top 20 growth occupations, 74% will pay less than $15 per hour, 47% will not require any formal educational credential at all, and 34% will require only a high school diploma.

Students will continue to be a significant part of the labor force. As more families face financial hardship and the cost of college continues to rise, more students will have to work while in school. Nationally, 20% of high school students, 41% of full-time college students, and 82% of part-time college students had a job in 2017. What's more, despite many students being employed, 45% of college students who completed the largest annual survey of basic college needs reported having experienced food insecurity in the previous month, and 56% had experienced housing insecurity in the prior year. And even with more students working, student debt will continue to increase as more students from lower-income families attend college and costs continue to rise. In Louisiana, 49% of college students who graduated in 2018 were in debt with an average loan of $27,151, a 11% increase from 2010.
NEXT STEPS: DATA FOR ACTION

The ALICE data highlights significant problems in the Louisiana economy in 2018: stagnant wages, a rising cost of living, and 51% of the state’s households unable to afford even the most basic budget. However, this data can also be used to generate solutions to these problems that help ALICE households and create equity across communities. The measures of cost of living, financial hardship, and changes in the labor force presented in this Report can help stakeholders ask the right questions and make data-driven decisions. This data can help policymakers and community organizations identify gaps in community resources, and it can guide businesses in finding additional ways to assist their workforce and increase productivity — both in times of economic growth and in periods of economic recovery.

This section of the Report maps the 2018 ALICE data, showing gaps in resources to help direct assistance and fill immediate needs. When analyzed in relation to broader data on health, education, and social factors, these maps help focus solutions on underlying causes of hardship, and they also highlight areas of success.

IDENTIFYING GAPS

ALICE households often live in areas with limited community resources, making it even more difficult to make ends meet. The lack of some resources has immediate and direct costs. For example, without public transportation or nearby publicly funded preschools, ALICE families pay more for transportation and child care. Other costs, such as the consequences of limited access to health care providers, open space, or libraries, accumulate over time.

With the ALICE data tools, stakeholders can map where ALICE lives along with the location of community resources — such as public libraries or disaster-relief services — to identify gaps by town, ZIP code, or parish (Figure 10). This data can help stakeholders answer targeted questions, including the following:

Do ALICE households have access to libraries?

There were over 16 million visits to Louisiana’s public libraries in 2018. Access to public libraries is especially important for ALICE families because libraries provide information on social services and job opportunities, free internet and computer access, and a range of free programs, community meetings, and even 3-D printers. After a natural disaster, libraries serve as second responders, providing electricity, internet access, charging stations, heat or air conditioning, and current information on recovery efforts. In lower-income communities, the library can provide a safe and inclusive place for individuals and families. A 2019 Gallup Poll found that lower-income households (earning less than $40,000 per year) visit the library more frequently than average- and higher-income households.

There are 332 libraries across Louisiana’s 64 parishes, shown in gold dots in Figure 10 (and in an interactive feature on UnitedForALICE.org/Louisiana). This data can help stakeholders identify where there are gaps in needed services (such as in areas with a high percentage of ALICE households but few or no libraries) and what type of intervention might be most helpful. For example, areas with a small population but a high percentage of ALICE households may benefit more from mobile library services than a new brick-and-mortar building, or library services (like free computers) could be offered in other public buildings.
Are the needs of ALICE households met after a natural disaster?

Mapping where ALICE households live in relation to the impact of natural disasters such as floods, hurricanes, or wildfires can help first and second responders meet critical needs. Disasters directly threaten the homes of ALICE families since more affordable housing is often located in vulnerable areas. The jobs where ALICE works are also more at risk, since low-wage and hourly paid jobs are more likely to be interrupted or lost. In addition, ALICE households have few or no savings for an emergency to begin with, and their communities often have fewer resources to assist households.75

Knowing where ALICE households live can help federal, state, and local governments target preparation, response, and assistance for natural disasters, and help companies plan where to deploy their workforce and support. Because ALICE households and communities do not have the same resources as their wealthier counterparts, namely insurance or savings, they will need more assistance over a longer period of time to recover. Strategies will vary by rural or urban context, the quality of the housing stock, and the age composition of the community (with the young and the elderly more dependent on care).76
UNDERSTANDING ALICE: HEALTH, EDUCATION, AND SOCIAL FACTORS

In most contexts, having a low income is associated with lower levels of education, higher rates of unemployment, and poorer health. Communities that have been able to disrupt that association can provide important insights on how to change environments or policy to support ALICE households. By tracking where ALICE lives with other indicators, it is possible to identify parishes that have overcome a challenge or bucked a trend. Stakeholders can then learn from these examples and adapt those solutions to their own areas.

Tracking relationships between ALICE households and other variables at the parish level — in areas such as technology or health — can also help stakeholders ask important questions and target resources where they can have the greatest impact. To see interactive maps of socioeconomic indicators in Louisiana, visit our website: UnitedForALICE.org/Louisiana

Here are two possible questions:

**Is internet access related to income?**

Access to digital technology has exploded over the last three decades: By 2018, 92% of U.S. adults owned a computing device and 85% had a broadband internet subscription. In Louisiana, the rates are slightly lower: 87% owned a computing device and 78% had a broadband internet subscription in 2018. Technology has also become more important for work, education, community participation, and, crucially, disaster response and recovery.

But access to technology still varies by income and geography. For many families, that lack of access translates directly to reduced job opportunities, educational opportunities, health care access, and financial tools. For example, low-income adults are more likely to use their phones to search and apply for jobs; nationally, 32% of smartphone users with income below $30,000 have applied for a job on their phone, compared with 7% of smartphone users with income above $75,000. Although smartphone technology is constantly improving, many tasks are still more difficult to complete on the small screen of a smartphone as opposed to a computer (e.g., word processing, filling out applications, editing spreadsheets), and many websites still do not have a mobile version, making navigation time-consuming and difficult, or sometimes impossible. Households without internet access are also at greater risk of being undercounted in the 2020 Census, when they may need government programs and services the most.

This high usage of smartphones for a critical task indicates that many low-income households have limited access to the internet at home. In Louisiana, 39% of households with income below the ALICE Threshold do not have an internet subscription, compared with only 11% for households above the ALICE Threshold. Rates also vary widely by location: The parishes with the lowest access rates and lowest income are in rural areas, where as many as one half of households below the ALICE Threshold do not have an internet subscription. Identifying these gaps can help businesses and government provide more resources to libraries, establish training centers, or target low-cost internet plans.

**Are drug overdoses driven by income?**

Louisiana, like many states across the country, has experienced an increase in drug overdose deaths over the last decade, largely due to an increase in deaths from opioid use. In 2017, the age-adjusted rate of drug overdose deaths in Louisiana was 24.5 per 100,000 population (higher than the U.S. rate of 21.7), with the total number growing 43% between 2014 and 2018 (increasing from 777 to 1,108). During the same period, the number of opioid-related deaths in the state increased by a substantial 85%.
Several national studies have suggested that counties/parishes with the worst economic prospects have the highest rates of substance use disorders and drug overdose hospitalizations and deaths. Yet that relationship varies across states, as people of all incomes, geographies, ages, and races/ethnicities suffer from substance use disorders. In Louisiana, drug overdose deaths in 2018 were reported in half of parishes across the state (32 out of 64), and opioid-related deaths were reported in 12 parishes. While some of the highest numbers of overdose deaths occurred in parishes that also had a high percentage of households below the ALICE Threshold, overall there was not a significant relationship between income (defined by the percentage of households below the ALICE Threshold) and drug overdose deaths across Louisiana’s parishes.

Understanding which communities have been hardest hit by substance use disorders can help planners and stakeholders see the complex ways in which addiction and financial hardship interact. Although economic standing is not always a risk factor for drug addiction in Louisiana, the consequences of addiction hit low-income families harder. The impact of addiction and substance use disorders on families often means a decline in their financial position, causing many families to become or remain ALICE. A family’s income may be reduced if addiction impacts an adult’s ability to work, and these families often have substantial health care costs. For example, addiction treatment ranges from $1,176 to $6,552 per month nationally. And lower-income families may not have access to such treatment programs, which only prolongs and compounds the outcomes of addiction. Substance use disorders take a toll on the stability of families and marriages, on parenting, and on the physical and mental health of family members. For all of these reasons, there can be huge value for community stakeholders in mapping where ALICE lives with drug overdose deaths to identify communities that have the greatest need but the fewest resources to address addiction-related problems.

THE BENEFITS OF MOVING TOWARD EQUITY IN LOUISIANA

The strength of the Louisiana economy is inextricably tied to the financial stability of its residents. The more people who participate in a state’s economy, the stronger it will be. In 2018, when the national economy was often described as “strong,” the reality was that 891,349 Louisiana households — over half of all households in the state — struggled to support themselves. If all households earned enough to meet their basic needs, not only would each family’s hardship be eased, but the Louisiana economy would also benefit substantially. This is true in times of economic growth, and it becomes even more important during a period of crisis and recovery.

To better understand the extent to which financial hardship is a drain on a state’s economy, this section provides an estimate of the benefits of raising the income of all households to the ALICE Threshold. While lifting family income would be an enormous undertaking, the statewide benefits of doing so make a compelling case for pointing both policy and investment toward that goal.

Based on 2018 data, the economic benefit to Louisiana of bringing all households to the ALICE Threshold would be approximately $55.3 billion, meaning that the state GDP would grow by 21% (Figure 11). This is based on three categories of economic enhancement:

**Earnings:** Louisiana’s 2018 GDP reflected earnings of $22.6 billion by the state’s households below the ALICE Threshold. Bringing all households to the ALICE Threshold would have a two-fold impact:

- **Additional earnings:** $21.4 billion statewide.

- **Multiplier effect:** Studies show that almost all additional wages earned by low-wage workers are put back into the economy through increased consumer spending, which in turn spurs business growth. Building on economic calculations used by Moody’s Analytics, this estimate assumes an economic multiplier of 1.2, meaning that a $1 increase in compensation to low-wage workers leads to a $1.20 increase in economic activity. In Louisiana, this increased economic activity would be valued at $25.7 billion.
**Tax revenue:** Louisiana’s 2018 GDP reflected tax revenue of $300 million from the state’s households below the ALICE Threshold. Bringing all households to the ALICE Threshold would have a two-fold impact:

- **Additional tax revenue:** With additional earnings, there would also be additional taxes paid and reduced usage of tax credits such as EITC for low-income earners, totaling an additional $700 million in tax revenue for Louisiana.

- **Multiplier effect:** Additional state tax revenue gives state and local governments the opportunity to make investments that matter most to the well-being of residents and businesses — from tax cuts for small businesses to improvements in infrastructure, including health care and education — that can yield a high return on investment. Based on work by the Congressional Budget Office and Moody’s Analytics, the estimated multiplier is 1.44, which would mean an added $1.1 billion in economic activity in Louisiana.89

**Community spending:** Louisiana’s 2018 GDP reflected community spending of $18.5 billion on assistance to the state’s households below the ALICE Threshold.90 When all households can meet their basic needs, this spending can be reallocated to projects and programs that help families and communities *thrive*, not just survive.

- **Indirect benefits:** Added value to the state GDP would come in the form of indirect benefits associated with increased financial stability. These benefits include improved health (and reduced health care expenditures), reduced crime and homelessness, and greater community engagement. Figure 11 uses the very conservative estimate of an added $6.4 billion (or 2.5% of the state GDP, which is the estimated cost of childhood poverty alone).91 This is still far short of the total indirect benefits of bringing all households to the ALICE Threshold, as it does not include benefits for adults or factor in the direct impact of redeploying private and nonprofit spending currently used to alleviate poverty.92

Benefits for Households and Local Communities

In addition to the economic benefits to the state if all households had income above the ALICE Threshold, there would be a significant number of positive changes for families and their communities. Our 2019 companion Report, The Consequences of Insufficient Household Income, outlines the tough choices ALICE and poverty-level families make when they do not have enough income to afford basic necessities, and how those decisions affect their broader communities. By contrast, Figure 12 outlines the improvements that all Louisiana families and their communities would experience if policies were implemented that moved all households above the ALICE Threshold.

<td>Greater charitable contributions; less spending on emergency health, food, and senior services</td>
</tr>
</tbody>
</table>

*Note: For sources, see Figure 12: Sources, following the Endnotes for this Report*
In addition to the benefits listed above, greater financial stability and having basic needs met can reduce the anxiety that comes from struggling to survive, or not having a cushion for emergencies. It also leaves more time to spend with loved ones and to give back to the community — all of which contribute to happiness and improved life satisfaction.\(^{95}\)

Having money saves money: Having enough income means that households can build their credit scores and avoid late fees, predatory lending, and higher interest rates.\(^{96}\) That, in turn, means that ALICE families have more resources to use to reduce risks (e.g., by purchasing insurance), stay healthy (e.g., by getting preventative health care), or save and invest in education or assets that could grow over time (e.g., buying a home or opening a small business). Instead of a downward cycle of accumulating fees, debt, and stress, families can have an upward cycle of savings and health that makes them even better able to be engaged in their communities and, in turn, enjoy a reasonable quality of life.

For communities, this leads to greater economic activity, greater tax revenue, lower levels of crime, and fewer demands on the social safety net, allowing more investment in vital infrastructure, schools, and health care.\(^{97}\) Strengthening communities by strengthening ALICE families means a higher quality of life for all.
ENDNOTES

3 Households on the cusp are defined as those with income in the Census income bracket above and below the ALICE Threshold. Income brackets begin with Less Than $10,000/Year; they increase in $5,000 intervals from $10,000–$50,000/Year; then they extend to $50,000–$60,000/Year, $60,000–$75,000/Year, $75,000–$100,000/Year, $100,000–$125,000/Year, and $125,000–$150,000/year.

4 Note: All racial categories except Two or More Races are for one race alone. Race and ethnicity are overlapping categories; in this report, the Asian, Black, Hawaiian (includes other Pacific Islanders), and Two or More Races groups may include Hispanic households. The White group includes only White, non-Hispanic households. The Hispanic group may include households of any race. Because household poverty data is not available for the American Community Survey's race/ethnicity categories, annual income below $15,000 is used as a proxy.

Note: 2007 data not available; average of 2006 and 2008 used instead

Note: Data are only available up to 2017, therefore there is a lag of one year; for example, 2018 ALICE data uses the 2017 data

Note: Data are only available up to 2017, therefore there is a lag of one year; for example, 2018 ALICE data uses the 2017 data

87 Congressional Budget Office. (2019, July 8). The effects on employment and family income of increasing the federal minimum wage. Retrieved from https://www.cbo.gov/publication/55410

88 Note: While there are increased costs to employers for paying higher wages — which may be passed on to consumers — these impacts primarily occur when wages are increased for jobs with wages well above the Household Survival Budget (See Congressional Budget Office, 2019).

Congressional Budget Office. (2019, July 8). The effects on employment and family income of increasing the federal minimum wage. Retrieved from https://www.cbo.gov/publication/55410

89 Note: The tax calculations include only state taxes, not federal or local. The Congressional Budget Office estimates the impact of tax cuts targeted at lower- and middle-income people and achieved without borrowing as high as 1.5; Zandi estimates the multiplier for increased infrastructure spending at 1.44. This calculation uses the conservative estimate of 1.44.

91 The National Academies of Sciences, Engineering, and Medicine analyzes the cost of childhood poverty and estimates that reversing it would add 5.4 percent to the state GDP. To be conservative, this analysis uses Holzer’s estimate that childhood poverty costs 2.5 percent of GDP in related health and criminal justice expenses.

ALICE IN ACADIA PARISH

2018 Point-in-Time Data

Population: 62,568 • Number of Households: 22,564
Median Household Income: $41,177 (state average: $47,905)
Unemployment Rate: 9.1% (state average: 6.4%)
ALICE Households: 31% (state average: 33%) • Households in Poverty: 23% (state average: 18%)
Sources: ALICE Threshold, 2018; American Community Survey, 2018

How has the number of ALICE households changed over time?

ALICE is an acronym for Asset Limited, Income Constrained, Employed — households that earn more than the Federal Poverty Level, but less than the basic cost of living for the parish (the ALICE Threshold). While conditions improved for some households from 2010 to 2018, many continued to struggle, especially as wages failed to keep pace with the cost of household essentials (housing, child care, food, transportation, health care, and a basic smartphone plan).

What types of households are struggling?

In the past few decades, there have been major shifts in household composition. The share of American adults who have never been married is at a historic high, as is the number of senior households. There is also a growing number of people who live alone or with roommates, and an increasing share of grown children who live with their parents. Yet all types of households continue to struggle: ALICE and poverty-level households exist across all of these living arrangements.

Households by Income, Acadia Parish, 2010 to 2018

Sources: ALICE Threshold, 2010-2018; American Community Survey, 2010-2018

Household Income by Household Type, Acadia Parish, 2018

Sources: ALICE Threshold, 2018; American Community Survey, 2018
Why do so many households struggle?

The cost of household basics outpaces wages...
The Household Survival Budget reflects the bare minimum cost to live and work in the modern economy and includes housing, child care, food, transportation, health care, technology (a smartphone plan), and taxes. It does not include savings for emergencies or future goals like college or retirement. In 2018, household costs were well above the Federal Poverty Level of $12,140 for a single adult and $25,100 for a family of four.

..and the labor landscape is challenging for ALICE workers

A breakdown of the labor force shows a small portion of adults (16 years and older) who were unemployed and a large number who were working in 2018. However, a significant portion of full- and part-time workers were paid by the hour; these workers were more likely to have fluctuations in income and less likely to receive benefits. There was also a high number of workers outside of the labor force (people who are not employed and not looking for work), which helped keep wages low: When more workers are available, employers have less incentive to raise wages to attract employees.

Labor Status, Population 16 and Over, Acadia Parish, 2018

Note: Data for full- and part-time jobs is only available at the national level; these national rates (51% of full-time workers and 75% of part-time workers paid hourly) have been applied to the total parish workforce to calculate the breakdown shown in this figure. Full-time represents a minimum of 35 hours per week at one or more jobs for 48 weeks per year.

What types of households are struggling?

In the past few decades, there have been major shifts in household composition. The share of American adults who have never been married is at a historic high, as is the number of senior households. There is also a growing number of people who live alone or with roommates, and an increasing share of grown children who live with their parents. Yet all types of households continue to struggle: ALICE and poverty-level households exist across all of these living arrangements.
Why do so many households struggle?

The cost of household basics outpaces wages...

The Household Survival Budget reflects the bare minimum cost to live and work in the modern economy and includes housing, child care, food, transportation, health care, technology (a smartphone plan), and taxes. It does not include savings for emergencies or future goals like college or retirement. In 2018, household costs were well above the Federal Poverty Level of $12,140 for a single adult and $25,100 for a family of four.

..and the labor landscape is challenging for ALICE workers

A breakdown of the labor force shows a small portion of adults (16 years and older) who were unemployed and a large number who were working in 2018. However, a significant portion of full- and part-time workers were paid by the hour; these workers were more likely to have fluctuations in income and less likely to receive benefits. There was also a high number of workers outside of the labor force (people who are not employed and not looking for work), which helped keep wages low: When more workers are available, employers have less incentive to raise wages to attract employees.

Labor Status, Population 16 and Over, Allen Parish, 2018

Note: Data for full- and part-time jobs is only available at the national level; these national rates (51% of full-time workers and 75% of part-time workers paid hourly) have been applied to the total parish workforce to calculate the breakdown shown in this figure. Full-time represents a minimum of 35 hours per week at one or more jobs for 48 weeks per year.

Sources: American Community Survey, 2018; Federal Reserve Bank of St. Louis, 2018

Note: Municipal-level data on this page is 1 or 5-year averages for Incorporated Places. Totals will not match parish-level numbers because some places cross parish borders. Data is not available for the smallest places and parish-level data is often 1-year estimates.
ALICE IN ASCENSION PARISH

2018 Point-in-Time Data

Population: 124,672 • Number of Households: 42,649
Median Household Income: $79,495 (state average: $47,905)
Unemployment Rate: 6.6% (state average: 6.4%)
ALICE Households: 26% (state average: 33%) • Households in Poverty: 12% (state average: 18%)

Sources: ALICE Threshold, 2018; American Community Survey, 2018

How has the number of ALICE households changed over time?

ALICE is an acronym for Asset Limited, Income Constrained, Employed — households that earn more than the Federal Poverty Level, but less than the basic cost of living for the parish (the ALICE Threshold). While conditions improved for some households from 2010 to 2018, many continued to struggle, especially as wages failed to keep pace with the cost of household essentials (housing, child care, food, transportation, health care, and a basic smartphone plan).

..and the labor landscape is challenging for ALICE workers

A breakdown of the labor force shows a small portion of adults (16 years and older) who were unemployed and a large number who were working in 2018. However, a significant portion of full- and part-time workers were paid by the hour; these workers were more likely to have fluctuations in income and less likely to receive benefits. There was also a high number of workers outside of the labor force (people who are not employed and not looking for work), which helped keep wages low: When more workers are available, employers have less incentive to raise wages to attract employees.

Labor Status, Population 16 and Over, Caddo Parish, 2018

Note: Data for full- and part-time jobs is only available at the national level; these national rates (51% of full-time workers and 75% of part-time workers paid hourly) have been applied to the total parish workforce to calculate the breakdown shown in this figure. Full-time represents a minimum of 35 hours per week at one or more jobs for 48 weeks per year.

Note: Municipal-level data on this page is 1 or 5-year averages for Incorporated Places. Totals will not match parish-level numbers because some places cross parish borders; data is not available for the smallest places, and parish-level data is often 1-year estimates.

ALICE IN CALCASIEU PARISH

2018 Point-in-Time Data

Population: 203,112 • Number of Households: 78,351
Median Household Income: $49,113 (state average: $47,905)
Unemployment Rate: 4.2% (state average: 6.4%)
ALICE Households: 33% (state average: 33%) • Households in Poverty: 13% (state average: 18%)

Sources: ALICE Threshold, 2010-2018; American Community Survey, 2010-2018

How has the number of ALICE households changed over time?

ALICE is an acronym for Asset Limited, Income Constrained, Employed — households that earn more than the Federal Poverty Level, but less than the basic cost of living for the parish (the ALICE Threshold). While conditions improved for some households from 2010 to 2018, many continued to struggle, especially as wages failed to keep pace with the cost of household essentials (housing, child care, food, transportation, health care, and a basic smartphone plan).

What types of households are struggling?

In the past few decades, there have been major shifts in household composition. The share of American adults who have never been married is at a historic high, as is the number of senior households. There is also a growing number of people who live alone or with roommates, and an increasing share of grown children who live with their parents. Yet all types of households continue to struggle: ALICE and poverty-level households exist across all of these living arrangements.
Why do so many households struggle?

The cost of household basics outpaces wages...

The Household Survival Budget reflects the bare minimum cost to live and work in the modern economy and includes housing, child care, food, transportation, health care, technology (a smartphone plan), and taxes. It does not include savings for emergencies or future goals like college or retirement. In 2018, household costs were well above the Federal Poverty Level of $12,140 for a single adult and $25,100 for a family of four.

The Household Survival Budget reflects the bare minimum cost to live and work in the modern economy and includes housing, child care, food, transportation, health care, technology (a smartphone plan), and taxes. It does not include savings for emergencies or future goals like college or retirement. In 2018, household costs were well above the Federal Poverty Level of $12,140 for a single adult and $25,100 for a family of four.

### Why do so many households struggle?

**The cost of household basics outpaces wages...**

..and the labor landscape is challenging for ALICE workers

A breakdown of the labor force shows a small portion of adults (16 years and older) who were unemployed and a large number who were working in 2018. However, a significant portion of full- and part-time workers were paid by the hour; these workers were more likely to have fluctuations in income and less likely to receive benefits. There was also a high number of workers outside of the labor force (people who are not employed and not looking for work), which helped keep wages low: When more workers are available, employers have less incentive to raise wages to attract employees.

**Labor Status, Population 16 and Over, East Baton Rouge Parish, 2018**

Note: Data for full- and part-time jobs is only available at the national level; these national rates (51% of full-time workers and 75% of part-time workers paid hourly) have been applied to the total parish workforce to calculate the breakdown shown in this figure. Full-time represents a minimum of 35 hours per week at one or more jobs for 48 weeks per year. Sources: American Community Survey, 2018; Federal Reserve Bank of St. Louis, 2018

Note: Municipal-level data on this page is 1 or 5-year averages for Incorporated Places. Totals will not match parish-level numbers because some places cross parish borders, data is not available for the smallest places, and parish-level data is often 1-year estimates.
ALICE IN EAST CARROLL PARISH

2018 Point-in-Time Data

Population: 7,225  •  Number of Households: 2,153
Median Household Income: $21,161 (state average: $47,905)
Unemployment Rate: 7.8% (state average: 6.4%)
ALICE Households: 27% (state average: 33%)  •  Households in Poverty: 44% (state average: 18%)

Sources: ALICE Threshold, 2018; American Community Survey, 2018

How has the number of ALICE households changed over time?

ALICE is an acronym for Asset Limited, Income Constrained, Employed — households that earn more than the Federal Poverty Level, but less than the basic cost of living for the parish (the ALICE Threshold). While conditions improved for some households from 2010 to 2018, many continued to struggle, especially as wages failed to keep pace with the cost of household essentials (housing, child care, food, transportation, health care, and a basic smartphone plan).

What types of households are struggling?

In the past few decades, there have been major shifts in household composition. The share of American adults who have never been married is at a historic high, as is the number of senior households. There is also a growing number of people who live alone or with roommates, and an increasing share of grown children who live with their parents. Yet all types of households continue to struggle: ALICE and poverty-level households exist across all of these living arrangements.

..and the labor landscape is challenging for ALICE workers

A breakdown of the labor force shows a small portion of adults (16 years and older) who were unemployed and a large number who were working in 2018. However, a significant portion of full- and part-time workers were paid by the hour; these workers were more likely to have fluctuations in income and less likely to receive benefits. There was also a high number of workers outside of the labor force (people who are not employed and not looking for work), which helped keep wages low: When more workers are available, employers have less incentive to raise wages to attract employees.

Note: Municipal-level data on this page is 1 or 5-year averages for Incorporated Places. Totals will not match parish-level numbers because some places cross parish borders; data is not available for the smallest places, and parish-level data is often 1-year estimates.
How has the number of ALICE households changed over time?

ALICE is an acronym for Asset Limited, Income Constrained, Employed — households that earn more than the Federal Poverty Level, but less than the basic cost of living for the parish (the ALICE Threshold). While conditions improved for some households from 2010 to 2018, many continued to struggle, especially as wages failed to keep pace with the cost of household essentials (housing, child care, food, transportation, health care, and a basic smartphone plan).

What types of households are struggling?

In the past few decades, there have been major shifts in household composition. The share of American adults who have never been married is at a historic high, as is the number of senior households. There is also a growing number of people who live alone or with roommates, and an increasing share of grown children who live with their parents. Yet all types of households continue to struggle: ALICE and poverty-level households exist across all of these living arrangements.
Why do so many households struggle?

The cost of household basics outpaces wages...

The Household Survival Budget reflects the bare minimum cost to live and work in the modern economy and includes housing, child care, food, transportation, health care, technology (a smartphone plan), and taxes. It does not include savings for emergencies or future goals like college or retirement. In 2018, household costs were well above the Federal Poverty Level of $12,140 for a single adult and $25,100 for a family of four.

There is also a growing number of people who live alone or with roommates, and an increasing share of grown children who live with their parents. Yet all types of households continue to struggle: ALICE and poverty-level households exist across all of these living arrangements.

Households by Income, LaSalle Parish, 2010 to 2018

Household Income by Household Type, LaSalle Parish, 2018

Sources: ALICE Threshold, 2010-2018; American Community Survey, 2010-2018

Sources: ALICE Threshold, 2018; American Community Survey, 2018
Why do so many households struggle?

The cost of household basics outpaces wages...

The Household Survival Budget reflects the bare minimum cost to live and work in the modern economy and includes housing, child care, food, transportation, health care, technology (a smartphone plan), and taxes. It does not include savings for emergencies or future goals like college or retirement. In 2018, household costs were well above the Federal Poverty Level of $12,140 for a single adult and $25,100 for a family of four.

A breakdown of the labor force shows a small portion of adults (16 years and older) who were unemployed and a large number who were working in 2018. However, a significant portion of full- and part-time workers were paid by the hour; these workers were more likely to have fluctuations in income and less likely to receive benefits. There was also a high number of workers outside of the labor force (people who are not employed and not looking for work), which helped keep wages low: When more workers are available, employers have less incentive to raise wages to attract employees.

Labor Status, Population 16 and Over, LaSalle Parish, 2018

Note: Data for full- and part-time jobs is only available at the national level; these national rates (51% of full-time workers and 75% of part-time workers paid hourly) have been applied to the total parish workforce to calculate the breakdown shown in this figure. Full-time represents a minimum of 35 hours per week at one or more jobs for 48 weeks per year.

Note: Municipal-level data on this page is 1 or 5-year averages for Incorporated Places. Totals will not match parish-level numbers because some places cross parish borders, data is not available for the smallest places, and parish-level data is often 1-year estimates.
How has the number of ALICE households changed over time?

ALICE is an acronym for Asset Limited, Income Constrained, Employed — households that earn more than the Federal Poverty Level, but less than the basic cost of living for the parish (the ALICE Threshold). While conditions improved for some households from 2010 to 2018, many continued to struggle, especially as wages failed to keep pace with the cost of household essentials (housing, child care, food, transportation, health care, and a basic smartphone plan).

What types of households are struggling?

In the past few decades, there have been major shifts in household composition. The share of American adults who have never been married is at a historic high, as is the number of senior households. There is also a growing number of people who live alone or with roommates, and an increasing share of grown children who live with their parents. Yet all types of households continue to struggle: ALICE and poverty-level households exist across all of these living arrangements.

Why do so many households struggle?

The cost of household basics outpaces wages...

The Household Survival Budget reflects the bare minimum cost to live and work in the modern economy and includes housing, child care, food, transportation, health care, technology (a smartphone plan), and taxes. It does not include savings for emergencies or future goals like college or retirement. In 2018, household costs were well above the Federal Poverty Level of $12,140 for a single adult and $25,100 for a family of four.

..and the labor landscape is challenging for ALICE workers

A breakdown of the labor force shows a small portion of adults (16 years and older) who were unemployed and a large number who were working in 2018. However, a significant portion of full- and part-time workers were paid by the hour; these workers were more likely to have fluctuations in income and less likely to receive benefits. There was also a high number of workers outside of the labor force (people who are not employed and not looking for work), which helped keep wages low: When more workers are available, employers have less incentive to raise wages to attract employees.

Labor Status, Population 16 and Over, Ouachita Parish, 2018

Note: For full- and part-time jobs, the 2018 data is only available at the national level; these national rates (51% of full-time workers and 75% of part-time workers paid hourly) have been applied to the total parish workforce to calculate the breakdown shown in this figure. Full-time represents a minimum of 35 hours per week at one or more jobs for 48 weeks per year.

Sources: American Community Survey, 2018; Federal Reserve Bank of St. Louis, 2018

Note: Municipal-level data on this page is 1 or 5-year averages for Incorporated Places. Totals will not match parish-level numbers because some places cross parish borders, data is not available for the smallest places, and parish-level data is often 1-year estimates.
How has the number of ALICE households changed over time?

ALICE is an acronym for Asset Limited, Income Constrained, Employed — households that earn more than the Federal Poverty Level, but less than the basic cost of living for the parish (the ALICE Threshold). While conditions improved for some households from 2010 to 2018, many continued to struggle, especially as wages failed to keep pace with the cost of household essentials (housing, child care, food, transportation, health care, and a basic smartphone plan).

What types of households are struggling?

In the past few decades, there have been major shifts in household composition. The share of American adults who have never been married is at a historic high, as is the number of senior households. There is also a growing number of people who live alone or with roommates, and an increasing share of grown children who live with their parents. Yet all types of households continue to struggle: ALICE and poverty-level households exist across all of these living arrangements.

Why do so many households struggle?

The cost of household basics outpaces wages...

The Household Survival Budget reflects the bare minimum cost to live and work in the modern economy and includes housing, child care, food, transportation, health care, technology (a smartphone plan), and taxes. It does not include savings for emergencies or future goals like college or retirement. In 2018, household costs were well above the Federal Poverty Level of $12,140 for a single adult and $25,100 for a family of four.

Costs of household basics:

- **Housing**: $508 for a single adult, $680 for 2 adults, 1 infant, 1 preschooler.
- **Child Care**: $– for a single adult, $1,069 for 2 adults, 1 infant, 1 preschooler.
- **Food**: $268 for a single adult, $810 for 2 adults, 1 infant, 1 preschooler.
- **Transportation**: $382 for a single adult, $850 for 2 adults, 1 infant, 1 preschooler.
- **Health Care**: $212 for a single adult, $844 for 2 adults, 1 infant, 1 preschooler.
- **Technology**: $55 for a single adult, $75 for 2 adults, 1 infant, 1 preschooler.
- **Miscellaneous**: $168 for a single adult, $496 for 2 adults, 1 infant, 1 preschooler.
- **Taxes**: $256 for a single adult, $628 for 2 adults, 1 infant, 1 preschooler.
- **ANNUAL TOTAL**: $22,188 for a single adult, $65,424 for 2 adults, 1 infant, 1 preschooler.

**Hourly Wage**: $11.09 for a single adult, $32.71 for 2 adults, 1 infant, 1 preschooler.

Note: Data for full- and part-time jobs is only available at the national level; these national rates (51% of full-time workers and 75% of part-time workers paid hourly) have been applied to the total parish workforce to calculate the breakdown shown in this figure. Full-time represents a minimum of 35 hours per week at one or more jobs for 48 weeks per year.

Note: Municipal-level data on this page is 1 or 5-year averages for Incorporated Places. Totals will not match parish-level numbers because some places cross parish borders, data is not available for the smallest places, and parish-level data is often 1-year estimates.

Why do so many households struggle?

The cost of household basics outpaces wages...

The Household Survival Budget reflects the bare minimum cost to live and work in the modern economy and includes housing, child care, food, transportation, health care, technology (a smartphone plan), and taxes. It does not include savings for emergencies or future goals like college or retirement. In 2018, household costs were well above the Federal Poverty Level of $12,140 for a single adult and $25,100 for a family of four.

..and the labor landscape is challenging for ALICE workers

A breakdown of the labor force shows a small portion of adults (16 years and older) who were unemployed and a large number who were working in 2018. However, a significant portion of full- and part-time workers were paid by the hour; these workers were more likely to have fluctuations in income and less likely to receive benefits. There was also a high number of workers outside of the labor force (people who are not employed and not looking for work), which helped keep wages low: When more workers are available, employers have less incentive to raise wages to attract employees.

### Labor Status, Population 16 and Over, Sabine Parish, 2018

Note: Data for full- and part-time jobs is only available at the national level; these national rates (51% of full-time workers and 75% of part-time workers paid hourly) have been applied to the total parish workforce to calculate the breakdown shown in this figure. Full-time represents a minimum of 35 hours per week at one or more jobs for 48 weeks per year.

ALICE IN ST. BERNARD PARISH

2018 Point-in-Time Data

Population: 45,694 • Number of Households: 15,029
Median Household Income: $46,011 (state average: $47,905)
Unemployment Rate: 10.3% (state average: 6.4%)
ALICE Households: 39% (state average: 33%) • Households in Poverty: 20% (state average: 18%)
Sources: ALICE Threshold, 2018; American Community Survey, 2018

How has the number of ALICE households changed over time?

ALICE is an acronym for Asset Limited, Income Constrained, Employed — households that earn more than the Federal Poverty Level, but less than the basic cost of living for the parish (the ALICE Threshold). While conditions improved for some households from 2010 to 2018, many continued to struggle, especially as wages failed to keep pace with the cost of household essentials (housing, child care, food, transportation, health care, and a basic smartphone plan).

What types of households are struggling?

In the past few decades, there have been major shifts in household composition. The share of American adults who have never been married is at a historic high, as is the number of senior households. There is also a growing number of people who live alone or with roommates, and an increasing share of grown children who live with their parents. Yet all types of households continue to struggle: ALICE and poverty-level households exist across all of these living arrangements.

ALICE IN ST. MARTIN PARISH

2018 Point-in-Time Data

Population: 53,752 • Number of Households: 19,556
Median Household Income: $47,974 (state average: $47,905)
Unemployment Rate: 6.8% (state average: 6.4%)
ALICE Households: 34% (state average: 33%) • Households in Poverty: 16% (state average: 18%)
Sources: ALICE Threshold, 2018; American Community Survey, 2018

How has the number of ALICE households changed over time?

ALICE is an acronym for Asset Limited, Income Constrained, Employed — households that earn more than the Federal Poverty Level, but less than the basic cost of living for the parish (the ALICE Threshold). While conditions improved for some households from 2010 to 2018, many continued to struggle, especially as wages failed to keep pace with the cost of household essentials (housing, child care, food, transportation, health care, and a basic smartphone plan).

What types of households are struggling?

In the past few decades, there have been major shifts in household composition. The share of American adults who have never been married is at a historic high, as is the number of senior households. There is also a growing number of people who live alone or with roommates, and an increasing share of grown children who live with their parents. Yet all types of households continue to struggle: ALICE and poverty-level households exist across all of these living arrangements.
**Why do so many households struggle?**

The cost of household basics outpaces wages...
The Household Survival Budget reflects the bare minimum cost to live and work in the modern economy and includes housing, child care, food, transportation, health care, technology (a smartphone plan), and taxes. It does not include savings for emergencies or future goals like college or retirement. In 2018, household costs were well above the Federal Poverty Level of $12,140 for a single adult and $25,100 for a family of four.

..and the labor landscape is challenging for ALICE workers

A breakdown of the labor force shows a small portion of adults (16 years and older) who were unemployed and a large number who were working in 2018. However, a significant portion of full- and part-time workers were paid by the hour; these workers were more likely to have fluctuations in income and less likely to receive benefits. There was also a high number of workers outside of the labor force (people who are not employed and not looking for work), which helped keep wages low: When more workers are available, employers have less incentive to raise wages to attract employees.

2018 Point-in-Time Data

Population: 22,475 • Number of Households: 7,724
Median Household Income: $43,083 (state average: $47,905)
Unemployment Rate: 6.3% (state average: 6.4%)
ALICE Households: 38% (state average: 33%) • Households in Poverty: 19% (state average: 18%)
Sources: ALICE Threshold, 2018; American Community Survey, 2018

How has the number of ALICE households changed over time?
ALICE is an acronym for Asset Limited, Income Constrained, Employed — households that earn more than the Federal Poverty Level, but less than the basic cost of living for the parish (the ALICE Threshold). While conditions improved for some households from 2010 to 2018, many continued to struggle, especially as wages failed to keep pace with the cost of household essentials (housing, child care, food, transportation, health care, and a basic smartphone plan).

What types of households are struggling?
In the past few decades, there have been major shifts in household composition. The share of American adults who have never been married is at a historic high, as is the number of senior households. There is also a growing number of people who live alone or with roommates, and an increasing share of grown children who live with their parents. Yet all types of households continue to struggle: ALICE and poverty-level households exist across all of these living arrangements.

Households by Income, Union Parish, 2010 to 2018

Household Income by Household Type, Union Parish, 2018

Sources: ALICE Threshold, 2010-2018; American Community Survey, 2010-2018
Why do so many households struggle?

The cost of household basics outpaces wages...

The Household Survival Budget reflects the bare minimum cost to live and work in the modern economy and includes housing, child care, food, transportation, health care, technology (a smartphone plan), and taxes. It does not include savings for emergencies or future goals like college or retirement. In 2018, household costs were well above the Federal Poverty Level of $12,140 for a single adult and $25,100 for a family of four.

For ALICE Survival Budget Sources, see the 2020 Methodology Overview available at UnitedForALICE.org/Methodology

..and the labor landscape is challenging for ALICE workers

A breakdown of the labor force shows a small portion of adults (16 years and older) who were unemployed and a large number who were working in 2018. However, a significant portion of full- and part-time workers were paid by the hour; these workers were more likely to have fluctuations in income and less likely to receive benefits. There was also a high number of workers outside of the labor force (people who are not employed and not looking for work), which helped keep wages low: When more workers are available, employers have less incentive to raise wages to attract employees.

Labor Status, Population 16 and Over, Union Parish, 2018

Note: Municipal-level data on this page is 1 or 5-year averages for Incorporated Places. Totals will not match parish-level numbers because some places cross parish borders, data is not available for the smallest places, and parish-level data is often 1-year estimates.

Why do so many households struggle?

The cost of household basics outpaces wages...

The Household Survival Budget reflects the bare minimum cost to live and work in the modern economy and includes housing, child care, food, transportation, health care, technology (a smartphone plan), and taxes. It does not include savings for emergencies or future goals like college or retirement. In 2018, household costs were well above the Federal Poverty Level of $12,140 for a single adult and $25,100 for a family of four.

A breakdown of the labor force shows a small portion of adults (16 years and older) who were unemployed and a large number who were working in 2018. However, a significant portion of full- and part-time workers were paid by the hour; these workers were more likely to have fluctuations in income and less likely to receive benefits. There was also a high number of workers outside of the labor force (people who are not employed and not looking for work), which helped keep wages low: When more workers are available, employers have less incentive to raise wages to attract employees.

Labor Status, Population 16 and Over, West Feliciana Parish, 2018

Note: Data for full- and part-time jobs is only available at the national level; these national rates (51% of full-time workers and 75% of part-time workers paid hourly) have been applied to the total parish workforce to calculate the breakdown shown in this figure. Full-time represents a minimum of 35 hours per week at one or more jobs for 48 weeks per year.

ALICE IN WINN PARISH

2018 Point-in-Time Data

Population: 14,494  •  Number of Households: 5,437
Median Household Income: $35,398 (state average: $47,905)
Unemployment Rate: 4.6% (state average: 6.4%)
ALICE Households: 36% (state average: 33%)  •  Households in Poverty: 23% (state average: 18%)

Sources: ALICE Threshold, 2018; American Community Survey, 2018

How has the number of ALICE households changed over time?

ALICE is an acronym for Asset Limited, Income Constrained, Employed — households that earn more than the Federal Poverty Level, but less than the basic cost of living for the parish (the ALICE Threshold). While conditions improved for some households from 2010 to 2018, many continued to struggle, especially as wages failed to keep pace with the cost of household essentials (housing, child care, food, transportation, health care, and a basic smartphone plan).

What types of households are struggling?

In the past few decades, there have been major shifts in household composition. The share of American adults who have never been married is at a historic high, as is the number of senior households. There is also a growing number of people who live alone or with roommates, and an increasing share of grown children who live with their parents. Yet all types of households continue to struggle: ALICE and poverty-level households exist across all of these living arrangements.
